

Analyze access to abortion services in your city or state in 200-300 words.

The abortion services in the country itself is not very user friendly. Same goes for my state and city (Maharashtra, Mumbai). The person can approach a medical practitioner for consult regarding abortion but after that getting access to the services is problematic. Even the medical practitioner tries to counsel the patient and does not give impartial judgement. At every step of the process, the seeker is asked questions and judged and misguided with myths and misconceptions surrounding the process. This leads to them probe their decision and at times back-out from the process or resort to un-safe measure to avoid scrutiny. Even if they do get the procedure done, there is no concern for post- abortion care leading to more medical complications and severe physical harm. There might be access to the abortion services but the accessibility is the issue.
